ATTN: Electrical Contractor

SBP Industries and Gillette Generators have partnered to provide a backup power generator service for electrical contractors like no other. The combination of SBP and Gillette give the electrical contractor in-depth turnkey engineering solutions and direct contact to the factory for rapid service and information. Gillette has over 40 years of service in residential, commercial, and industrial markets with standby equipment ranging from 8 KW to 350KW. SBP has been engineering power projects for 40 years from emergencies to backup solutions.

Customer service is key to both SBP and Gillette. We will work with your engineering to insure the best and most cost effective solution for your client. Lead times are the shortest in the industry, frequently 3 to 5 weeks. The generator quality is among the best with excellent reliability. The electrical contractor no longer has to sacrifice quality for budgetary constraints.

We invite you to call 1-800-458-4231, for a formal quotation for your next generator project.

If you are interested in partnering with us as your generator equipment vendor, we would like to send you sales literature on our generator line, so you may read and discover the many products we offer to serve and benefit your group.

SBP Industries looks forward to the opportunity to serve you, the electrical contractor.

Regards,

Michael Goncharko
